

## **OUTSIDE CLASS**

### **Week 1:**

I did nothing regarding the course. However, I started learning python which was mainly because of the motivation to learn new things I had gained in Tuesday's class.

### **Week 2:**

Our team (Me, Aravind, Naveen and Satyendar) discussed many ideas. However, we were unable to figure out any idea that was unique. Finally, we got an idea regarding which not much work had been done. So, we decided to go ahead with the idea. I continued with my python course and continued to learn it. I also revised HTML and CSS concepts.

### **Week 3:**

After a hefty discussion with sir, we had to dump that idea and move to a new idea. We thought about the possible features that can be inculcated in this idea. Also, we discussed about the possible technologies we should use.

P.S.- Continuing with my python course.
